

Turn scattered matter records into a **decision-ready** knowledge base

The Problem

Your legal knowledge — matter files, briefs, contracts, opinions, negotiation histories, outcome records — is scattered across DMS folders, inboxes, and departed associates' drives. Finding how the firm argued a similar issue takes days of billable time; advice consistency depends on who staffed the matter.

What Neuron Does

It links every record into one ontology-structured database anchored to each matter number, so your team gets instant answers to "how did we handle this issue before, and did it work?" and "which active contracts carry this same risk?" — without changing how you work today.

What you can do with the centralized database

01

Surface precedent matters at intake

Flag new matters that match past cases — by issue, opposing party, forum, and outcome — so strategy starts from what the firm already learned.

02

Check exposure across the contract base

When one clause is ruled risky or a regulation shifts, instantly see every executed agreement carrying the same language and judge the full client exposure.

03

Verify strategies actually worked

Track which arguments, settlement postures, and clause positions produced outcomes across similar matters — evidence for advising the next client.

04

Advise with full institutional memory

Surface similar past matters, drafts, and their results at judgment time, so associate turnover doesn't reset the firm's expertise.

"An associate found the winning argument from a 2019 matter in minutes — one that the partner who wrote it had half-forgotten. That search used to be unbillable archaeology."

Knowledge Management Partner - Corporate law firm

See it with your own data

We start with a focused PoC using your existing matter files — briefs, contracts, memos, as they are. No system migration, no process change required.
